Vandercook Repro Papers and Inks

Vandercook Satin-Tone Repro Paper

This is an excellent sheet for reproduction proofs and for in-plant use. It is coated on both sides, and either side can be used. It will withstand the heat in most dryers or drying cabinets without excessive curling. The hard finish coating not only results in proofs with good definition, but also permits users to rule-up without feathering. Vandercook Satin-Tone is approximately .004" in thickness.

6" x 9"- pkge. of 500 Sheets (X-22780-1).....	\$ 3.70
9" x 12"- pkge. of 500 Sheets (X-22780-2).....	7.25
12" x 18"- pkge. of 500 Sheets (X-22780-3).....	14.20
19" x 25"- pkge. of 500 Sheets (X-22780-4).....	27.00
19" x 25"- 5 to 10 pkges., 500 Sheets each, pkge. ....	23.00

(Larger quantities will be quoted on request)

Vandercook Gold-Tone Repro Paper

Processed with the finest double-coating on one side, this paper will produce repro proofs of the highest quality. This is a special paper—made with a gold cast on the reverse side for identification, as well as for anti-curl purposes—and when used in conjunction with Vandercook Heat-Set or Fast-Dry Repro Black Inks will produce repro proofs with hairline definition, superior opacity, and without halations. Gold-Tone has a highly ink receptive coating which tends to print up low characters in the form. It is about .0035" in thickness and will take wax backing.

6" x 9"- pkge. of 500 Sheets (X-24266-1).....	\$ 5.25
9" x 12"- pkge. of 500 Sheets (X-24266-2).....	10.25
12" x 18"- pkge. of 500 Sheets (X-24266-3).....	20.00

19" x 25"- 5 to 10 pkges., 500 Sheets each, pkge. ....	34.00

(Larger quantities will be quoted on request)

Vandercook Trans-Tone Repro Paper

The flawless base of this stock is formulated to rigid photographic standards. Trans-Tone also has a special coating which provides an exceptional blue-white surface for reproduction proofs. One additional advantage is its translucency, which permits proofs of line work to be contacted direct to film in the conventional manner. In thickness, Vandercook Trans-Tone is approximately .0035".

6" x 9"- pkge. of 500 Sheets (X-24267-1).....	\$ 5.50
9" x 12"- pkge. of 500 Sheets (X-24267-2).....	10.75
12" x 18"- pkge. of 500 Sheets (X-24267-3).....	21.00
19" x 25"- pkge. of 500 Sheets (X-24267-4).....	40.00
19" x 25"- 5 to 10 pkges., 500 Sheets each, pkge. ....	36.00

(Larger quantities will be quoted on request)

3M Scotchprint Brand Printing Stock

A dimensionally stable plastic printing material which has (1) a smooth, grainless surface that is highly ink receptive, (2) excellent translucency for contacting to negative or positive film, (3) resistance to temperature and humidity changes, and (4) it will not curl. One particular advantage of Scotchprint is that it can be subjected to excessive squeeze without embossing or dot slur on forms that are not in the best condition.

9" x 12"-box of 100 Sheets (X-22834-1).....	\$ 23.00

Discount of 8% on orders of \$500.00 or more

Vandercook Fast-Dry Repro Black Ink

Formulated mainly for producing repro proofs of line copy, Fast-Dry will set up sufficiently for handling immediately after a proof is pulled. Any proof press used for high grade repros should be washed up at least every four hours. Vandercook Fast-Dry Repro Black will remain open on the press four hours with favorable shop and atmospheric conditions. Fast-Dry never skins up.

One-Pound Can, per pound (X-17482).....	\$ 5.00
Six or more One-Pound Cans, per pound.....	4.00

Vandercook Heat-Set Repro Black Ink

Specially formulated for use on Vandercook repro papers, as well as other high quality repro papers. Proofs can be used immediately after forced drying in the Vandercook Rotary Proof Dryer or other means of supplying sufficient heat. Will not skin, and stays open on the press.

One-Pound Can, per pound (X-24471).....	\$ 5.00
Six or more One-Pound Cans, per pound.....	4.00

Vandercook Conversion Black Ink

Formulated especially for obtaining top results on Scotchprint and acetate as well as repro paper. When used on synthetic rubber rollers (which are recommended), this ink will remain open on the press for at least four hours or better, and only an average of about 15 minutes of air drying will be necessary for the ink to set up sufficiently to permit handling of the finished Scotchprint proof. When used on Vandercook Gold-Tone Repro Paper, it is not affected by rubber cement.

One-Pound Can, per pound (X-22778).....	\$ 5.00
Six or more One-Pound Cans, per pound.....	4.00

Vandercook Engravers Black Ink

Compounded to give brilliant reproduction of halftones, this ink will produce sharp, opaque impressions over the entire gray scale, ranging from the tiniest highlight dots to the densest tone, when used with top grade enamel stock.

One-Pound Can, per pound (X-22835).....	\$ 5.00
Six or more One-Pound Cans, per pound.....	4.00

Vandercook Galley Black Ink

Formulated especially to work on galley proof presses that receive infrequent washups. Even though this ink will remain open and usable on the press for several days, minimum form roller swelling will be experienced. Works exceptionally well on newsprint or super-calendared stock for reader or identification proofs.

One-Pound Can, per pound (X-10227).....	\$ 5.00
Six or more One-Pound Cans, per pound.....	4.00

Vandercook .0015" Acetate

This is a cellulose acetate of the best quality—completely transparent, uniform in thickness, and free from imperfections. Excellent results will be obtained when used with Vandercook Conversion Ink or any ink of comparable quality. For extra density, proofs on Vandercook Acetate can be dusted with opaquing material such as lampblack, red or black oxide, and similar dusting powders.

Package of 100—14" x 20" Sheets (X-4658-2).....	\$ 4.60
Five or more packages of 100—14" x 20" Sheets.....	4.00

Vandercook Replacement Inking Rollers

Vandercook replacement inking rollers are constructed with Buna-N synthetic rubber (Type A) or Urethane (Type B) on brand new cores, and ground to our close tolerances. These rollers are guaranteed to fit your equipment properly and will give trouble-free performance. The finest proofing results will be achieved with Vandercook replacement inking rollers since they are manufac-

tured to our specifications—which have been established through our close relationship with photoengravers, typographers and printers for over 50 years. Type A form rollers are generally recommended for printers, typesetters and newspapers. Type B are recommended for use on photoengravers test presses as well as on electric galley proof presses.

NOTE—Prices of Vandercook Replacement Inking Rollers include throw-away cores, except those that are indicated—see foot notes. Rollers listed are in stock and ready for shipment.

\*Credit cannot be allowed for return of old cores.  
\*\*Price includes new style throw-away core. When these new rollers are ordered for the first time, it is necessary to also order a

set of new style removable roller trucks for each roller at \$9.85 per set of two.  
\*\*\*Credit of \$9.00 for return of old Vibrator Roller prepaid.

PLEASE NOTE—Single or combined orders for \$50.00 or more of Vandercook Graphic Supplies will be shipped prepaid.

PLEASE NOTE—Single or combined orders for \$50.00 or more of Vandercook Graphic Supplies will be shipped prepaid.

Vandercook Roller-Blanket Conditioner

Vandercook Roller-Blanket Conditioner is a combination of chemicals in paste form that will quickly remove dried ink, varnish and glaze from all standard inking rollers, as well as offset blankets. It is most effective when applied with the

Vandercook Roller Brush. Vandercook Roller-Blanket Conditioner, which deep cleans as it conditions, is recommended for use at least once a week, or more frequently if necessary, to keep rollers and blankets in a "like-new" condition.

1/2-Gallon Can (X-24796).....	\$ 10.00	8.85
Vandercook Roller Brush (X-24797).....	\$ 2.50	1.50

Vandercook Treated Tympan Cylinder Packing

Manufactured to the highest degree of uniformity, and without either hard or soft spots. Vandercook Treated Tympan Drawsheets and Undersheets are die cut to exact measurements, and are guaranteed to fit the machines on which

they are to be used. In thickness, both the drawsheets and undersheets for all machines are approximately .006" thickness, except the drawsheets for the Vandercook 325, 425, 25-24, and SP25 which are .010" thickness.

Vandercook Under Blankets

Vandercook under blankets are manufactured to close tolerance in order to insure maximum uniformity—and are widely used for the purpose of providing softer or more resilient packing. They are available in two thicknesses, and

for most Vandercook machines. Prices for under blankets for other Vandercook machines not listed below will be furnished on request.

● When ordering, be sure to give Model and Serial Number of proof press

Vandercook Top Blanket

Manufactured to close tolerance to insure uniformity in thickness, this durable low static blanket—with its buffed rubber face—provides a tough, resilient printing surface which will

absorb excessive abuse from inaccurate forms. Approximately .026" in thickness. Prices for top blanket for Vandercook presses not listed below will be furnished on request.

Vandercook Blankets for Transparencies

The three blankets listed below are widely used in typographic plants and composing rooms for pulling sharp, opaque transparencies. The .032" and .065" offset blankets are used mainly for pulling two-sided transparencies—one impression direct from the form, and a second impression simultaneously on the reverse side, in register, from an offset impression on the blanket. The .032" blanket is intended for

machines having a cylinder undercut .040", while the .065" blanket is used on presses with a .070" undercut cylinder. Vandercook Papercote Blankets are .020" in thickness and consist of a .010" sheet of rubber laminated to a manila sheet of the same thickness. Papercote Blankets are used for pulling multiple one-sided impressions on acetate or similar materials.

## Vandercook Frisket Rolls and Die-Cut Sheets

Vandercook Frisket Paper is supplied either in rolls or die-cut sheets for various current and older Vandercook presses, as listed below. One side of this paper is specially treated with silicone so that, when it comes in contact with the inked engravings, it will not absorb the ink—and the problem of ink

penetration is avoided. This special silicone treatment also results in releasing the paper more easily from the inked engravings. Adhesive tapes can be used on the uncoated side in the usual manner. Each roll contains about 300 yards and is about .004" in thickness.

● *When ordering, be sure to give Model and Serial Number of proof press*

MODEL NUMBER OF PROOF PRESS	QUANTITY	DIE-CUT SHEETS		ROLLS
